## VS - Variators

### Description

The variators Series VS are manufactured with housing and covers of pressure die cast aluminium up to the size VS080 and cast iron for bigger units.

The torques as shown in selection tables, are output torques referred to the specific size and powers referred to 1440 rpm.

The variators are delivered already filled with lubricant up to size 80 and for bigger sizes, with lubricant in a separate kit, in the right oil quantity for the mounting positions as shown at page 6.

Selection table data are intended for service factor 1.0, i.e. 8-10 running hours per day, uniform load, less than 6 start/stops per hour and ambient temperature ranging from 15 to 35 °C.

#### **Speed ratios**

VS variators are manufactured without fixed reduction as standard but all the types of Varvel gearboxes can be directly plugged in.

Incorporation of 2 or 3 stage helical, parallel shaft, bevel/helical (in-line or right-angle) and worm gearboxes is easily done with input flange to match IEC motors giving a wide choice of speed ranges.

Actual values are depending on real reduction ratio, motor size and load, and mains conditions.

## Variators - VS

### Description

	<b>GENERAL SPECIFICATIONS</b>
Range	6 sizes VS 63, 71, 80, 90, 100, 112
Gearboxes RD	7 sizes 28 reduction ratios 2300Nm max. torque
Gearboxes RN	6 sizes 42 reduction ratios 3400Nm max. torque
Gearboxes RO/RV	6 sizes 33 reduction ratios 3400Nm max. torque
Gearboxes RS/RT	RS - 9 sizes RT - 7 sizes 55 reduction ratios 3020Nm max. torque
Housing Covers	Pressure die cast aluminium till VS080. Grey cast iron from VS090.
Toothed parts	Helical gears: case hardened, ground or shaved. Wormshafts: case hardened with ground ZI profile. Bronze gears on cast iron hub.
Shafts Keys	Steel C43 Shafts h7 - Bores E8 Keys according to DIN6885 B1
Bearings	Ball or roller bearings according to sizes and technical requirements
Oil seals	Type NB - nitril-butadiene with additional anti-dust lip according to DIN 3760
Lubricant	Automatic transmission fluid
Coating	Spray or epoxy-powder RAL9006

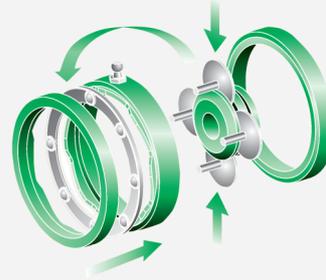

## VS - Variators

### Operation principle

Minimum speed

Maximum speed

#### Variator operation

The speed is adjusted by a manually operated hand wheel, fitted on the top of the casing.

The hand wheel can be fitted on either sides of the control shaft.

Usually, the hand wheel is fitted on the left side when looking from the motor fan.

The hand wheel position can be easily modified by using the second extension of the control shaft.

#### Working principle

The fixed inner race (10) fitted on motor shaft and the mobile race (11), pressed by Belleville washers (12), transmit rotation to planetary discs (7) that moving on the two outer races (6) and (9), accordingly rotate the planetary disc holder (2) (one-piece with the output shaft) to which the planetary discs are connected through the sliding bushes (3).

The hand wheel controls the rotation of the race (6) and its axial movement.

Such shifting is given by ball action (5) on the two opposite cams (4) and (6), and it acts on the cone sides by moving them radially inside the races (10) and (11), and beating this way the spring reaction (12).

The variation of contact position on planetary disc sides originates the speed variation of disc holder and consequently, of the output shaft.

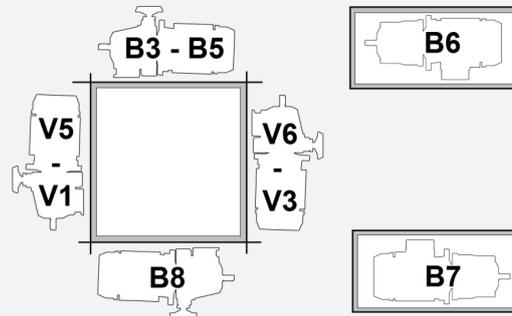

Items of internal parts used in working principle description are listed at page 10.

#### Attention !

**Do not adjust the output speed when the variator is at standstill.**

## Variators - VS

### Mounting positions

#### Forme costruttive

Per tutte le grandezze e per tutte le forme costruttive sono possibili due costruzioni:

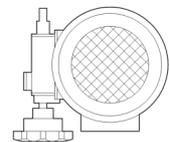

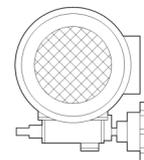

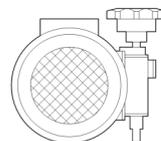

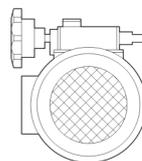

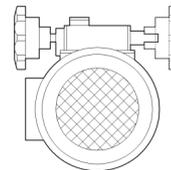

- MVS  
motovariatore completo di motore elettrico
- FVS  
variante predisposto all'accoppiamento di motore elettrico IEC-B5

Se non stabilito diversamente all'ordinazione, i variatori sono fabbricati per funzionamento orizzontale e con fissaggio a flangia B5 per accoppiamento ai riduttori ad ingranaggi o a vite senza fine.

#### Control hand wheel position

**Sx (std)**  
Left side

**Dx (optional)**  
Right side

### Service factors, Weights, Oil

Service factor FS1.0 is meant as typical of 8-10 hours/day operation, with uniform load and starts/ stops lower than 6 per hour and ambient temperature between 15 and 35 Celsius.

The ratio between the drive's maximum output torque  $M_2$  and application torque  $M_{(app)}$  defines the drive's Duty Factor that must be equal or bigger than the Service Factor SF.

For max. ambient temperature exceeding 40 °C or below 0 °C, please ask our Pre-sales Service.

For other operation conditions, the service factors of the two tables have to be multiplied accordingly.

#### Service Factor SF

Load type				Start-Stops per hour		SF = SF <sub>1</sub> x SF <sub>2</sub>
hours	uniform SF <sub>1</sub>	variable SF <sub>1</sub>	with shocks SF <sub>1</sub>	number	SF <sub>2</sub>	
< 8	0.8	1.0	1.5	6	1.0	
8 - 16	1.0	1.3	1.8	60	1.2	
24	1.4	1.6	2.0	120	1.4	

#### Weights (kg) Oil (litres)

VS	kg	I (B5)	I (V1)	I (V3)
063	3.4	0.13	0.3	0.2
071	4.7	0.15	0.4	0.25
080	7.8	0.33	0.8	0.45
090	31	0.8	1.4	1.0
100	55	1.2	2.1	1.2
112	57	1.2	2.1	1.2

#### Recommended lubricants

## Variators - VS

Gearbox fitting

Please ask for the individual catalogues of the gearboxes

- RD helical,
- RN parallel,
- RO and RO2 in-line bevel/helical,
- RV right-angle bevel/helical,
- RS original worm,
- RT universal worm

to select the needed reduction ratios and torques of the following motor-variator-gearbox combinations:

- MVS / FRD
- MVS / FRS
- MVS / FRT
- MVS / FRN
- MVS / FRO
- MVS / FRO-2
- MVS / FRV

## VS - Variators

### **Abstract of OPERATION AND MAINTENANCE INSTRUCTIONS**

(complete manual on [www.varvel.com](http://www.varvel.com))

Under the terms of the Machine Directive 2006/42/EC and relevant Guidelines, the speed gearboxes and variators are considered as "machines" separate elements not having a specific application and meant for being incorporated onto the machine. The complete machine and equipped with such components must comply with the essential and relevant requisites for safety and health preservation" of the mentioned Directive.

#### **Installation**

Check if the unit to be installed, is properly selected to perform the required function and that its mounting position complies with the order.

The nameplate reports such information.

Check mounting stability to ensure the unit runs without vibrations or overloads.

#### **Running**

The unit may be connected for clockwise or counter-clockwise rotation.

The unit must be stopped as soon as defective running or unexpected noise occur. remove the faulty part or return the unit to the factory for checking.

If the faulty part is not replaced, other parts can also be affected, causing more severe damage and making the identification of initial cause more difficult.

#### **Maintenance**

Although the units are no-load run tested in the factory before despatch, it is recommended not to run them at maximum load for the first 20-30 running hours to allow the proper running in.

#### **Handling**

When hoisting, use relevant housing locations or eyebolts if provided, or foot or flange holes.

Never hoist on any moving part.

#### **Painting**

Carefully protect oil seals, coupling faces and shafts when units are re-painted.

#### **Long-term storage**

For storages longer than three months, apply anti-oxidants onto shafts and machined surfaces, and protective grease on oil seal lips.

#### **Product's Environmental Management**

In conformity with Environmental Certification ISO 14001, we recommend the following to dispose of our products:

- scraped components of the units to be delivered to authorized centres for metal object collection;
- oils and lubricants drained from the units to be delivered to Exhausted Oil Unions;
- packages (pallets, carton boxes, paper, plastic, etc..) to lead into regeneration/recycling circuits as far as possible, by delivering separate waste classes to authorized companies.
